

Turner Precision Engineering

A U S T R A L I A

Like chess, engineering too occasionally presents its problems – the piece on the front of our brochure with all its complexities was designed and produced from a solid bar in one operation.

Compliant to ISO 9001:2000 (quality manual available on request), we specialise in volume production – our capacity list is enclosed.

Our computer controlled production and planning is supported by some of the latest CNC for turning and milling, production drilling/tapping and grinding, all manned by highly skilled engineering craftsmen.

Our ability to appreciate customers needs, to be flexible when necessary and deliver constant high quality comes from a lifetime of experience in this business.

*“Our services
run day and night
if necessary.”*

*“Quality control
is our constant
companion.”*

*“Saving your
time is our
business.”*

It's your move...

so, talk to Turners!
